Exp: 2 Conversion From Regular Expression To NFA

Name: - Sai Mohit Ambekar

Reg No: - RA1911031010137

Class: - CSE-IT (L2 Section)

AIM: -

To write a program for converting Regular Expression to NFA.

ALGORITHM: -

- 1. Start
- 2. Get the input from the user
- 3. Initialize separate variables and functions for Postfix, Display and NFA
- 4. Create separate methods for different operators like +,*, .
- 5. By using Switch case Initialize different cases for the input
- 6. For ' . ' operator Initialize a separate method by using various stack functions do the same for the other operators like ' * ' and ' + '.
- 7. Regular expression is in the form like a.b (or) a+b
- 8. Display the output
- 9. Stop

PROGRAM: -

```
rows, cols = (20, 3)
q = [[0]*cols]*rows
reg = input("Enter your Regular Expression: ")
```

```
len = len(reg)
i = 0
j = 1
print(q)
while(i < len):
  if reg[i] == 'a':
        if reg[i+1] != '|' and reg[i+1] != '*':
